RE: Safety of Safetec Lens Cleaner for Anti-Reflective Coated Lenses

At Safetec, we understand the importance of preserving the integrity of your eyewear, particularly when it comes to anti-reflective coated lenses. We have received inquiries regarding the compatibility of our Lens Cleaner pre-moistened lens wipes with anti-reflective coatings, and we appreciate the opportunity to address this concern.

Our Lens Cleaner product is meticulously crafted with your eyewear's longevity in mind. Safetec's Lens Cleaner consists of a specially formulated combination of high-purity water, isopropyl alcohol, and propylene glycol. Through our testing, these ingredients have not currently been shown to react adversely with today's eyeglass lens materials, including those with anti-reflective coatings.

It is crucial to us that our customers feel confident in their choices. Therefore, we encourage everyone to consult their eyewear professionals to confirm the suitability of using our lens wipes on their specific glasses. With advancements in lens technology, there are now multiple coatings available, and a professional assessment ensures the best care for your eyewear.
